

Fortnite

Summary of Fortnite Battle Royale

Fortnite Battle Royale was released in 2018 after the developers saw how popular the original Fortnite was. The concept of the game is very similar to other games and has almost the same goal. At the beginning of the match, a total of 100 players use parachutes to drop down on the map. There are multiple different areas to choose from and you'll be able to see where the other players are landing. Once you hit the ground, you'll want to find a weapon as soon as possible because the only thing you start with are your hands. You can find weapons, ammo, and armor in the chests that are scattered all around the map.

As you find items and search for other players, you should watch your map to see where the storm is. This will be indicated by a circle and you'll want to stay inside that circle. If you get caught in the storm, you'll start losing health until you either get into the circle or die. The circle will eventually stop in a very small area and you'll have to get into battle with the other players to see who will win. To help you during these battles, you'll use some of the materials you found to build structures. Other players do this too and the structures will need to be destroyed before the player will start taking damage. The last ones standing wins. # Fortnite Gameplay

When the game loads up, you'll want to choose the game mode you want to play, which are solos, duos, and squads. Solo mode is every player for themselves, duos mode puts everyone on teams of 2, and squads will put everyone on teams of up to 3 people. You'll start out on a flying bus and you'll have to decide which area of the map you want to land. If you're squad leader, you can put a marker on the spot you want to go. Once you deploy your parachute and reach the ground, you'll want to find buildings and chests as soon as you can to see what kinds of items, materials, and weapons you can find.

Once the area is scavenged, you and your teammates will want to move to another location. The best strategy is to try and stay hidden and get to the circle. If you happen to see another player on the way, you'll want to attack and kill them. If you succeed, the dead players will drop items that you can pick up. If you watch your map, you'll be able to see where the circle is and information telling you how many people are left can be seen underneath it. Most of the time, players will stay hidden until the circle becomes so small that everyone has to be close to each other. When this happens, it's usually a full-on battle and the last person or team alive wins.

Fortnite Review

With all things considered, Fortnite for mobile is a game with decent graphics and gameplay. Not only does it have less violence than other similar games, but it has the same features as the console or PC version. It's also an added bonus that you can keep the volume down and keep the chat off, especially for those parents that are allowing their younger kids to play the game. If you

want to keep playing Fortnite, but need to be away from your console or PC and don't mind controls or graphics that aren't as good quality, then the mobile version should work just fine. It's also a good option for parents that don't want their children to play games with too much violence.

Advantages / Disadvantages

It has the same features as the console or PC version. You can play without the sound and still see where enemies are. Less violence than other games. The chat can be turned off.

The servers aren't always very stable. The visuals sometimes glitch out. The controls aren't that great compared to console or PC.
