

# Roblox

## Summary: A very dynamic and lively community driven game.

A limitless virtual universe. Endless ways to play, create and discover. Play millions of worlds, games and unique player created areas. Create your very own characters and play with your friends online in a vast global community. Hang out and chat with friends and find something new every day. Play mobile or on any platform including VR.

You can truly do or be anything. From customizing your avatar, to the area or games you're playing. If you can think of it, you can probably do it in Roblox. This vast community driven game won't leave you disappointed.

## Gameplay: Play or create just about anything.

This game is more about building unique environments than following a scripted story. Get creative and show your unique styles and ideas. Build what your mind desires or simply enjoy the endless and growing library of content. There's something new and exciting to see every day. You really do have just about any option you want.

There are tons of player created levels and games to play, where you can unlock items to customize your virtual characters. If you want to show your creativity and build something, you can use Roblox Studio to create your very own games using the robust game engine, which allows you to even sell in game items to other players. Participate in real time virtual events, easter eggs hunts and many more via the thriving community of players. ## Review/Conclusion: Tons of content, but perhaps quantity over quality.

The popularity of this game speaks for itself. This game has millions of user created levels and content. Roblox certainly won't leave you absent of new things to do or explore. You can go from puzzles, platforming, racing or much much more all in the same app. With such a unique and well designed world, there are countless things to do. It's a safe space for kids to enjoy as well.

The studio tool is pretty powerful and you can create a lot of really unique and fun content using it. It does have a bit of a learning curve but something that would be great for anyone to learn. This is a great concept for a game well recognized with a robust community and in game systems and tools to support it. Once you become part of this community, you likely won't want to leave.

Advantages / Disadvantages

Endless content and great community support. The same issues that plague the rest of the internet though.

This game really is endless and still has a strong community behind it driving content forward constantly. There will always be plenty to do and it can even be a great space to hang out with friends and socialize.

With the content being largely community driven, some of the games you find will be sub par or just not all that fun. This game can feel limiting due to its unique blocky art style and will never really feel like a AAA title. A lot of its audience is a bit on the younger side as well, making the community younger and some of the content more aimed at kids.

At the same time, with the games and content being mostly created by older audiences, this is something you probably want to monitor your kids on just a bit. T

here is a pretty robust content management system but there are some problematic references in some user content that can slip through from time to time.

The internet does always have a dark side and sometimes some unsavory or just plain weird stuff can make its way into Roblox as well.
